

Case Study

Perrott's Inch Bridge University College Cork Campus , Cork

Main Contractor: L & M Keating
Year of Completion: 2024

Perrott's Inch Bridge was constructed in University College Cork (UCC) built and designed to connect the lower grounds of UCC'S main campus to Perrott's Inch and the Western Road . Throughout this project we supplied Ready Mix Concrete to help make this project happen. This modern day sculpture highlights the plasticity of Kilsaran concrete to create elegant forms in the differing conditions on each side of the bridge.

This project is an integral component of the University Environmental Development Plan and a delightful addition to the banks of the Lee, facilitating pedestrian connectivity across the river within the UCC campus.
